

Argo

The crew of the Argo are deciding who deserves a bonus . They have decided that they would calculate the average number of Hydra heads that the crew members chopped off. Those crew members that chopped off more than the average number would receive a bonus

Tasks:

1. Calculate the median, mean and mode average number of Hydra heads chopped off per crew member and enter in cells B38, B40 and B42
2. Use Conditional Formatting in the list below to format all values above the median average using a bold and italicised blue font
3. Record a suitable title above the table below. This should be centred above the table and use a brown Arial font of size 16
4. Save the worksheet as a pdf, ensuring that it is printed on one page and all entries are legible.
